The opioid renewal clinic: a primary care, managed approach to opioid therapy in chronic pain patients at risk for substance abuse

Description: The objective of the study was to measure the effects of a nurse practitioner- and clinical pharmacist-run clinic on chronic pain patients at risk for substance abuse. The program to support PCPs who are managing chronic non-cancer pain with opioids in at risk patients was successful: 45% resolved their aberrant behaviors. Authors: Wiedemer NL, Harden PS, Arndt IO, Gallagher RM.
